

Challenge 13: Game Design

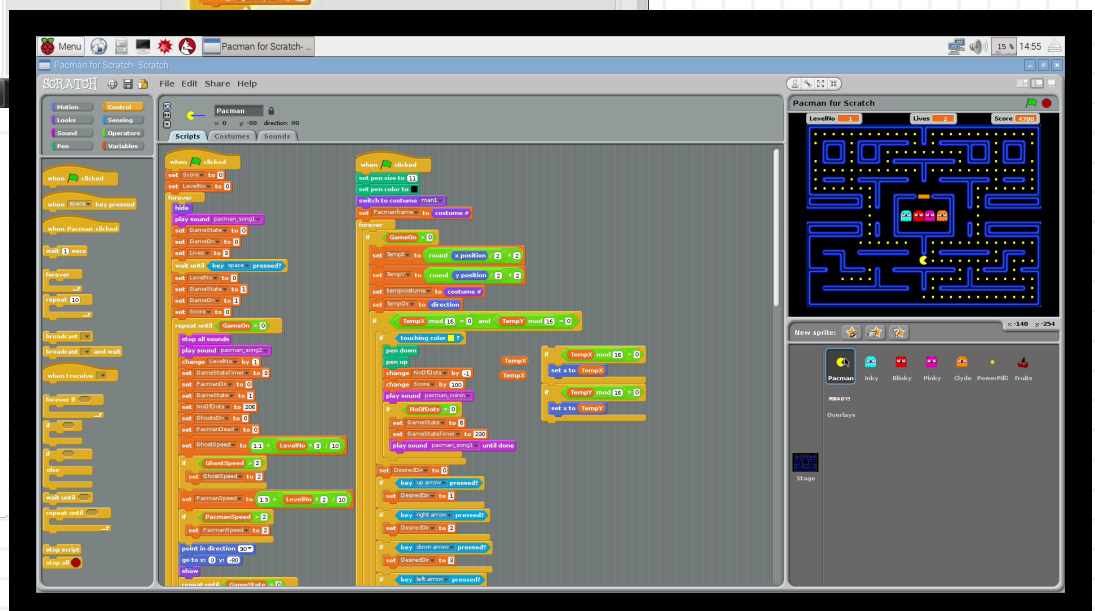

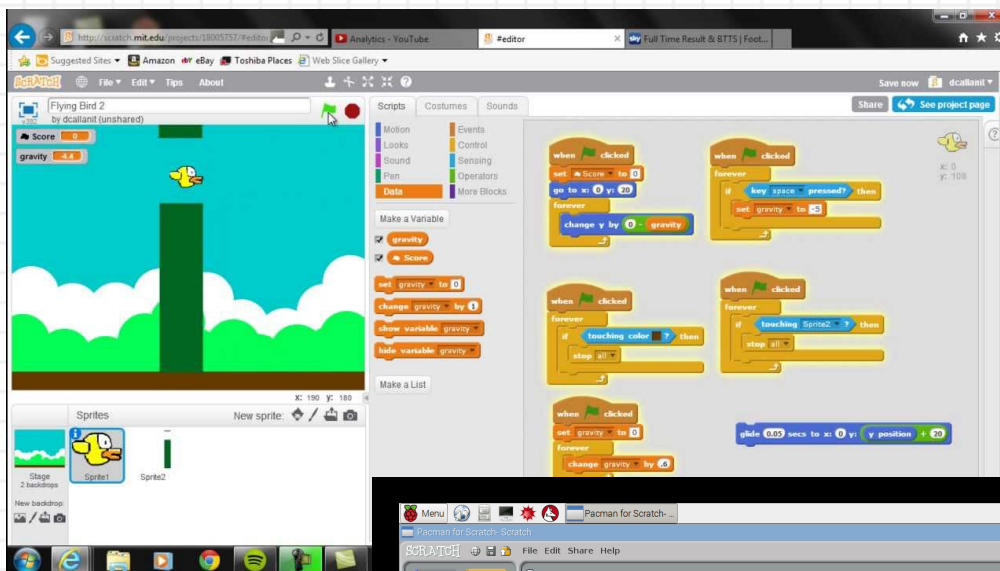

Digital games are rapidly becoming a form of creative expression. This challenge focuses on the principles and techniques of video game design and production using a program called Scratch.

Challenge:

Choose one of the games provided and code it in Scratch. Once it is complete, modify at least three variables to make it your very own game (sprite, object, background, placement, colors, scoring)
Play the game with others!

SCRATCH

Question: When coding a game in Scratch, what are the most important tips/tricks you would share with someone that has never done it before?
